

942/943 EM - adding elegance and improved visibility to the low level environment

942/943EM Emergency Step Light

Recognizing the perils of a dark smoke-filled environment, common sense and local codes often require that indoor exit and/or emergency lighting must be at low levels in the path of egress. However, the ADA requires that luminaires mounted below six feet must be extremely shallow - a maximum 4" protrusion from the wall. The 94 Line emergency luminaire accomplishes both tasks in handsome fashion, as well as providing an exceptional source of non-emergency low level illumination. Frequently, the path of egress does not end at the front door of a facility, making it necessary, in the event of a power interruption, to provide emergency lighting to "the public way". This unique series provides a recessed indoor and outdoor emergency lighting alternative that meets NEC and Life Safety Code requirements.

Benefits

- Protected against moisture, dust and insects
- Low-glare illumination, free from streaks or striations
- Quick installation and maintenance
- Eliminates potential for misapplication
- Provides additional design flexibility

942/943EM Emergency Step Light

Features

- Sealed and gasketed
- Specular Alzak hammertone reflectors
- Firmly secured reflector and electrical assembly
- Available for installation in all types of wall construction

Application

- Landscape
