

Avalume - value-focused, sleek profile and rugged construction

Avalume Area

The Avalume is a rectilinear area luminaire defined by its sleek rounded profile and rugged construction. The housing is one-piece, diecast aluminum and mounts directly to a pole or wall without the need of a separate support arm. The multifaceted arc-image duplicating optical systems provide IES Types III and IV distributions. The door frame is single-piece diecast aluminum and retains an optically clear tempered flat glass lens. The luminaire is completely sealed and gasketed preventing intrusion from moisture, dust and insects. The Avalume luminaires are finished with a fade and abrasion resistant TGIC powdercoat.

Benefits

- Easily mounts to both round and square poles
- Uniform distribution
- Superior brightness control
- Minimized glare at normal viewing angles
- Protects against insects, dust and moisture

Features

- Die-cast aluminum housing
- Integral mounting arm
- Segmented optical system
- Zero upright optics
- Silicone gasketing

Application

- Parks and Plazas
- Road and Street
