- Solar energy

Special characteristics

- Touch dimmer on article
- Weather-proof
- Maximum light duration: 9 hours

Enjoy your outdoor life

- Warm white light
- perfect to relax and socialise
- Create a stylish atmosphere

Highlights

Integrated solar panel

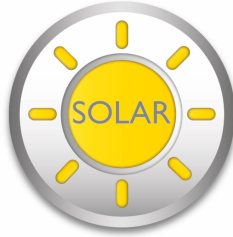

This Philips myGarden Solar light has an integrated solar panel as part of the light. The light is free of cables and emits up to 100 lumens of light, enough to illuminate a defined area or highlight a feature.

No power cables required

Philips myGarden Solar takes the hard work and hassle out of outdoor installation, requiring just a few simple minutes to place in your garden even if you've never installed outdoor lighting before. With no mains power cables to worry about, there's lots of flexibility for placement since you don't need to be close to a power socket.

Solar energy

Philips myGarden Solar lights are designed to make the most of the energy they receive from the sun, for light that lasts longer. With no electricity consumption at all, they help you save money on your electricity bills and do your bit for the environment.

Touch dimmer on article

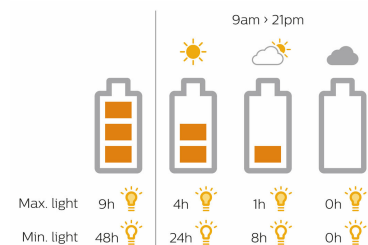

Intuitively operated, just touch the dimmer and adjust the light to create the best ambience in your room.

Weather-proof

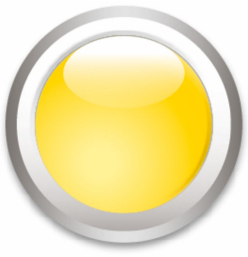

This Philips outdoor lamp is specially designed for humid outdoor environments and has undergone rigorous tests to ensure its water resistance. The IP level is described by two figures: the first one refers to the protection level against dust, the second against water. This lamp is designed with IP44: it is protected against splashing water. This product is most common and ideal for general outdoor use.

Maximum light duration: 9 hours

The product needs sunlight to charge, and the length of lighting time depends on the amount of sunlight the solar panel receives. With a full battery, the product will give up to 9 hours of light with the highest light intensity. To extend the duration you can dim the light. The more you dim, the longer the light output lasts. With a full battery, you can achieve up to 22 hours of light on the lowest intensity level.

Warm white light

Light can have different colour temperatures, indicated in units called Kelvin (K). Lamps with a low Kelvin value produce a warm, more cosy light,

while those with a higher Kelvin value produce a cool, more energising light. This Philips lamp offers warm white light for a cosy atmosphere.

perfect to relax and socialise

This Philips MyGarden Solar light is portable and ideal for creating the perfect mood for your outdoor space. It is dimmable and can be placed anywhere you need it

Create a stylish atmosphere

You can create your own personal light by placing items inside. Be careful not to damage the LED modules and do not put any liquid inside.

Specifications
