Designed for perfect light quality

- High color rendering (CRI <gt/> 80) for vivid colors

Highlights

Warm white light (2700K)
Light can have different color temperatures, indicated in units called Kelvin (K). Bulbs with a low Kelvin value produce a warm, more cozy light, while those with a higher Kelvin value produce a cool, more energizing light.

Beautiful, switched on an off
Familiar shapes are a perfect fit for your fixtures: we have retained the shapes and appearance of the classic light bulb.

High color rendering (CRI<gt/>80)

The color rendering index (CRI) is used to describe the effect of a light source on color appearance. Natural outdoor light has a CRI of 100 and is used as the standard of comparison for any other light source. The CRI of Philips LED light bulbs is always higher than 80, close to the sun's value, reflecting colors truly and naturally.
