

AmpLight – Centralized Streetlight Control

AmpLight

AmpLight group management is a cabinet-based solution for monitoring and control of road and street lights. It is designed for road authorities such as medium to large municipalities and highway authorities in need for a reliable street lighting control system that can be hosted on-premise.

Benefits

- Philips provides end-to-end solutions including hosting & connectivity
- Maximum energy savings of up to 35% thanks to special Philips algorithms
- Uses future-proof and scalable technology

Features

- A turnkey AmpLight solution monitors and controls the control cabinet
- AmpLight controls can be installed in an existing cabinet to control and monitor the lamps in that cluster
- AmpLight uses a user-friendly software tool capable of showing all relevant information, for example failures, energy consumption, lifetime, etcetera
- Real-time monitoring using web mapping services from the Internet with an option for the customer to use Google maps

Application

- Highways, roads
- Street lighting in general
- Residential areas
