

# **Dynalite Multipurpose Controllers**

Within any project, many different lighting load types may be required to achieve a desired result. Each of these load types may require a different style of control. The Philips Dynalite range of multipurpose controllers allows customization of output types via different output module units. When using DIN-rail multipurpose controllers, a specific type of control can be chosen for each circuit: relay, leading-edge dimmer, trailing-edge dimmer, ballast control, controller with out-of-the-box functionality, fan control, and blind/screen control. In any combination, multiple load types can be controlled from a single device. This simplifies installation and prevents wasted capacity of circuits that are not required.

#### **Benefits**

- Controllers support distributed intelligence, i.e. each device has a CPU with presets and can act as a stand-alone control unit
- · Some devices have out-of-the-box functionality with re-configuration capability
- · Simplified network messages and commissioning process

### **Features**

- $\boldsymbol{\cdot}$  Controllers can directly drive the different lighting groups within projects
- Controllers support an industry-standard RS485 port to communicate with other devices on the DyNet network, as well as with 3rd-party devices like HVAC, network devices, user interfaces
- · Available in both DIN-rail and wall-box configurations
- Devices can store over 170 presets, allowing recall of complex switching logic from simple network messages
- $\cdot$  Preset scenarios are stored within each relay device

# **Application**

· Depends on the lighting system in which the controls are used
