

943 - adding elegance and improved visibility to the low level environment

943 Vertical Aisle Light

The 943 vertical mount luminaire provides the capability for mounting in confined wall areas. The 943B luminaire is a unidirectional bollard which is ideal for illuminating pathways without undesired back lighting. In addition, this compact architectural form allows the unit to be mounted in pillars, monuments and columns (by others). A choice of faceplates further extends design opportunities.

Benefits

- Protected against moisture, dust and insects
- Low-glare illumination, free from streaks or striations
- Quick installation and maintenance
- Eliminates potential for misapplication
- Provides additional design flexibility

Features

- Sealed and gasketed
- Specular Alzak hammertone reflectors
- Firmly secured reflector and electrical assembly
- Available for installation in all types of wall construction

Application

- Walkways
