

EcoForm – redefining value with outstanding performance

EcoForm – Wildlife Friendly

We offer a range of site and area lighting solutions that are approved for use in areas within close proximity to sea turtle habitats. Incorporating amber LEDs in our luminaires ensures that light pollution will not interfere with sea turtles nesting and hatching patterns. The amber light source produces a narrower spectrum by omitting blue light that the sea turtles would otherwise confuse as moonlight. Each fixture will also include a specially designed shield to ensure that light is directed only to the target area. For more information on our standard Ecoform luminaire, please visit the [~LT~a href="http://http://www.usa.lighting.philips.com/products/product-highlights/ecoform" target="_blank"~GT~LT~b~GT~EcoForm product page.~LT~/b~GT~LT~/a~GT~](http://http://www.usa.lighting.philips.com/products/product-highlights/ecoform)

Benefits

- Wildlife friendly
- Maximizes pole spacing
- Seamless replacement of existing luminaires

Features

- Narrow range wavelength solution
- Retrofit arm available
- Optimized distribution patterns
- Suitable for a variety of applications
- Various distributions available, including shielding options

EcoForm - Wildlife Friendly

Application

- Parks and Plazas
- Road and Street
- Bridges, Monuments, Facades
