## VAYACT LRC2013 DMX 6-SPLITTER RB-6WM

DMX controlled 6-way splitter (RB-6WM)

Philips Vaya DMX Booster is a 6-output DMX/RDM splitter with DMX/RDM passthrough supporting bi-directional communications for discovery, addressing and DMX control of Philips Vaya products. This unit takes the incoming DMX/RDM signal and splits the signal into six separate output channels, allowing expansion of the number of devices controlled from 32 to 6 x 32. The output terminals are electronically isolated from the input & RDM-through port and share a common ground reference. All six output ports have an independent output driver to boost the DMX/RDM signal.
