

Maxos, TL-D standard trunking

4MX056 581 2x7x2.5 SI

MAXOS TST8, Silver

The trunking fulfils two functions: first it provides a sturdy in-line mounting rail on which to fix the electrical units, and second, it provides a housing for the electrical cables that bring power to the units. All the trunking sections are made of hot-dip galvanised steel, with a white or silver coating. They are available in lengths of 1, 2 and 3 electrical units 36 W and 58 W. A flat ribbon cable (5 or 7 wires) or two flat ribbon cables (2x5 or 2x7 wires) are integrated in the trunking and guarantee (in combination with an integrated phase selection switch and contact blocks) a safe and correct cabling. The 7-wire cable is used to integrate light regulation or emergency lighting for those electrical units equipped with emergency battery packs. Double wiring (2x5 or 2x7 wires) is needed to provide a completely separate mains supply to the electrical units. Double wring is mostly used for emergency lighting by central emergency batteries or separate switching. Hence, no extra contact blocks or wiring needs to be installed.
