

Programmable Motion Response

Programmable Motion Response Remote Control

Programmable Motion Response Remote Control

Programmable Motion Response maximizes your outdoor lighting energy savings while supporting security efforts. Upon easy installation, Programmable Motion Response dims your outdoor LED luminaire to a low light output, increases to a high light output only when motion is detected, and returns to the original low output after a defined time. Motion-based dimming may prolong the;LED luminaire and electrical component lifespans, for significant energy and cost savings during unoccupied periods. Preprogrammed or customized settings control light, duration, and sensitivity levels, as well as daylight sensing for even more energy savings. Settings are easily changed at the luminaire with an optional wireless handheld programmer, and custom factory based programs are also available.

Product data

General Information	
Downlight Type	Controls

Product Data	
Order product name	Programmable Motion Response Remote Control
Order code	Prog MR Rem

Material Nr. (12NC)	PLC20000024
Commercial Code	Prog MR Rem
Catalog Number Description	Programmable Motion Response Remote Control
Quick Ship	-
